

# HAYLIX PROTECT

## Rising Cyber Threats

**Businesses need to ensure their IT systems remain operational and data accessible in the event of a wide ranges of real world challenges.**

Cyber threats pose an increasing strain on budgets, technology architecture, and process. Ransomware strategies can financially cripple businesses and poorly architect backup and disaster recovery services offer false security.

Further complicating data protection is the expansion of hybrid business applications and services.

The challenge of how to orchestrate and manage the protection and recovery of data, applications and entire systems is where Safe COPY Backup as a service and Safe PLACE, Disaster Recovery as a service covers your business continuity requirements, securely and affordably.

## A Secure Solution

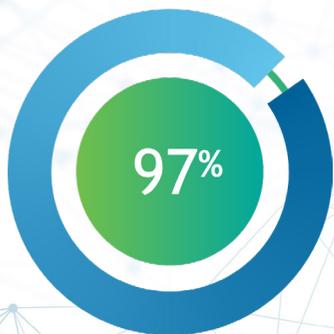

**The Haylix PROTECT suite offers industry leading data protection & business continuity services around the enhanced orchestration of compliant and continuous cloud protection.**

Your application and service spawl will be contained within the Haylix PROTECT framework.

No matter how stringent your data protection and recovery demands may be, Safe COPY and Safe PLACE will ensure

your business services remain online with access to your validated data over time.

- Compliance Backup & DR documentation
- Automation for compliance & security
- Integrity checks to ensure data is malware free
- Hassle & risk free DR testing
- Hybrid cloud orchestration
- Imitability though technology & design

97% of ransomware attacks attempted to infect backup repositories  
73% of those attempts were successful

43% of companies experiencing major data loss go out of business if they have no disaster recovery plan

36% is the average data loss after a ransomware attack

76% of companies had at least one ransomware attack in 2021

### Backup as a Service

Maintaining access to your online platform by ensuring your valuable data remains available, durable and responsive has never been more complex.

Against the acceleration of cyber threats, business's need Safe COPY & Safe COPY+, Backup as a Service solution to protect

against evolving Ransomware attacks & human error to name just a few.

Safe COPY+ meets the most stringent compliance, protection & restoration demands through technology, design & AI automation.

Safe COPY

Based upon native backup services within AWS and Azure, and architected to ensure performance, technology separation and immutable. Safe COPY satisfies the majority of business needs at an economical price point.

Safe COPY+

For the most advanced & highly granular backup service requirements. Safe COPY+ provides the most flexible & robust data protection capabilities that can span across multi-cloud solutions to satisfy the most stringent RTO & RPO requirements.

### Disaster Recovery as a Service

Protecting your cloud, Hybrid/Multi-cloud against infrastructure or service failure with integrated native cloud services, enhanced disaster recovery platforms all with a compliance and cyber protection first design.

With increased demands for availability across all business sizes and expansion of services being offered, how to manage the recovery of complete datasets is challenging and complex, Safe PLACE provides simplified, orchestrated business continuity and DR compliance.

Safe PLACE

Designed to provide affordable and secure disaster recovery. Low RPO, customer and flexible multi-site & region replication.

Safe PLACE +

Delivering enhanced orchestration of disaster recovery protection and testing. Safe PLACE+ integrates with the majority of leading applications and databases to provide sub minute disaster recovery synchronisations (RPO) and failover.

Built to satisfy cross business billing chargeback as well as compliance reporting through automated DR documentation.

## Feature Set

	BACKUP		RECOVERY	
	Safe COPY	Safe COPY+	Safe PLACE	Safe PLACE+
Multi-site / Multi-region protection capable	█	█	█	█
Data encryption at rest & in-flight	█	█	█	█
Hardened / multilayer Immutable storage & design	█	█	█	█
Database integration	█	█	█	█
Native AWS & Azure Backup services	█	█	█	█
Capacity planning & chargeback	█	█	█	█
Orchestrated Hybrid / Multi-Cloud Backup	█	█	█	█
Ransomware protection - Immutable backups	█	█	█	█
Ransomware protection - Restore malware scan	█	█	█	█
Kubernetes - native backup	█	█	█	█
Hybrid backup - On-prem to Multi-cloud	█	█	█	█
Application aware image-based backups	█	█	█	█
Sub minute RPO & Failover	█	█	█	█
Orchestrated Hybrid / Multi-cloud Disaster Recovery	█	█	█	█
Continuous data protection	█	█	█	█
Simplified site recovery & DR Test	█	█	█	█
DR failover orchestration	█	█	█	█
Automated DR documentation for compliance	█	█	█	█
